**NEW RELEASES FOR THE DRAGON 32/64  
FROM SALAMANDER SOFTWARE**

# TURTLE GRAPHICS

This program has been designed to provide a method of drawing pictures with your computer which is both fun and educational, and yet simple enough to be enjoyed by the young or inexperienced computer user and the reluctant adult.

Pictures are drawn by telling the "turtle" to move forward and turn so that it traces a picture on your TV screen or a colour printer.

Powerful "repeat" and "local library" facilities allow you to build up new commands to your program, and you add to your "word library" on cassette tape or floppy disc.

The use of recalled values in your built-in fields or expanded knowledge of geometry, and a basic understanding of simple programming, makes the program an ideal educational tool for all ages.

- Sweezy 32 page manual included.
- Built from cassette or disc (using either Dragon Data DDS or Premier Microsystems DDS).
- Simple command structure.
- Repeat command sequences - under machine 32 levels.
- "Word" notation - can be printed in 32 levels.
- Powerful "word library" facilities.
- Cass and disc library using cassette or disc.
- Dynamic editing of command strings and word library.
- Saving and retrieving commands.
- Will draw pictures on a colour printer (using 1198-65 GOR115 MOP-65 or compatible printer).

Price  
£5.95

## DATA RETRIEVAL SYSTEM

RDS is a powerful database package for the Dragon computer, supporting files stored either on cassette or disc (using the Dragon Data DDS).

RDS has been designed for ease of use and flexibility. You can design precise databases, specifying number and type of fields. Powerful screen editors allow easy design of your own screens.

RDS contains full facilities for adding, maintaining and deleting records. Fields may be added to or deleted from existing files even after records have been added. Search facilities allow for selection of records by any portion or combination of fields.

RDS also has an extremely flexible report generator, allowing for anything from printing of lists to paginated reports.

- 25,000 characters of data per file
- 128,000 characters of data per disc file
- Each record may contain a maximum of 255 characters, 25 alphanumeric fields and 10 numeric fields
- Inclusive, exclusive and range searches on alphanumeric fields
- Comparison searches on numeric fields
- Add, delete and change records
- User definable screen editors
- User definable report generators
- Payment records may be changed at any time
- Data files require Dragon Data DDS

# INTRODUCTION TO 'DRAGON WORLD'

We are all excited this month with our distribution deal with GDC which will offer Dragon considerable opportunities to prosper and grow. This arrangement also provides more exciting products as a result of combining our resources - which we are confident you will find interesting and useful.

Dragon still continues to flourish overseas and this month we greet new readers in Canada and welcome their involvement in the DRAGONWORLD.

Finally, may we thank you for your continuing support for DRAGON WORLD. We are very pleased with the response to date and look forward to your correspondence which is proving to be most helpful.

## EDITORIAL

We have been aware for some time that there is a need for more peripherals for Dragon computers, so we are delighted to be able to give you the advance information that a whole new range of products, including printers, plotters and a data recorder, will be available shortly. Full details will be given in the next issue of Dragon World. This, coupled with the new product range to be launched soon, means a very exciting future for Dragon Data.

You may well have heard that GDC have signed a joint and marketing agreement with Dragon Data. It will be of great benefit to all to have the strength of the mighty GDC behind Dragon Data and GDC have been able to add more computers to their vast range of products. We hope this arrangement will enable Dragons to be available in far more outlets than before, but let us assure you that Dragon Data will still be here to help you with any problems or difficulties you may have.

The winner of the Dragon User of 1983 competition has been decided. This was a very difficult task, as the standard of entries was so high. Thank you for all your entries — we hope to have a similar competition this year.

The response to our software offers has been immense, and we are pleased to say that we have more special offers for you this week. New software titles are appearing on a regular basis and reviews, on several items are included in this issue.

We do appreciate receiving contributions from Dragon Users, so usual, please send all communications to the editorial address.

# USER CLUB NEWS

I realise all has been quiet on the Dragon Users Group for a while now but this month we are looking to change that. Our proposal has been organised tours of the factory. Many of you wish to see how we operate and this would be an ideal opportunity. We also plan to open our shop facility at the end of the tour so you can buy all those goodies you are having difficulty obtaining from the dealers. Anyone interested please contact me or Kevin Stephens on 0655 744700 for further details.

Good news on the software front too, we are now offering 10% discount on most of our software products to those clubs who have completed the Special Club order form (to be issued shortly). If you have not as yet sent me your details and want to take part in this scheme, pen to post with details of your club.

I hope that you now feel that things are moving in the right direction. Keep the letters flowing in with news on your clubs.

## PEN PALE

Mr Paul Beffield would like to start up a Pen Pal Club and anyone interested should contact him at St. Sourd Hill Quarry Bank, Bursley Hill, West Midlands DY5 2AT.

## CLUB LIST ADDITIONS

### ENGLAND

#### Herts

Contact: Mr. Adrian May  
Partners Island Corp.  
6955 Preston Road  
Parsippany

#### Hants

Romsey Area Dragon User Group has regular meetings and a newsletter. For details, please send SAE to: Ashley Atkinson.

#### St. Elmo

St. Elmo Lane  
West Wellow  
Romsey SO5 0BY  
or phone Romsey 23041

#### Herts

Contact: Paul Kennedy  
The Herts & Essex Dragon Owners Club  
161 Queens Close  
Welles  
Herts.  
Paul is looking for new members in his area, club membership is modest at present with 14 members on a good day.

#### Leeds

Contact: Steve Melrose  
4 Kempton Avenue  
Blackpool FY3 9HS  
Steve wants to start up a club in the Blackpool/Fylde area.

### London

Philip Firth  
Time & Talent Youth Clubs  
Community Centre  
The Old Montway  
St. Mary Church Street  
Nottingham  
London SE16

This is basically a youth club but they have got two Dragons. A registered charity aimed to help 11-18 year olds. I am sure that offers of help will be welcomed.

### Manchester

Master John Edwards,  
60 Roddill Drive  
Bapley M22 0PF

John is a 14-year-old who would like to start a club for the Greater Manchester area. You may contact him by telephone, but please insist that you phone ONLY between 5pm and 7pm. Call No. 061 958 4438.

### Midlands

68 Micro Group  
41 Pethworth Road  
Harlow  
Hodde, HA1 3UD

This club will be of more interest to the various programmers. They cover aspects of various 88 series micros and have six-monthly newsletters including a page for Dragon users. Membership is £9 per annum.

### Surrey

P. R. Young  
Dragon Computer Club  
Flat 1,  
3 St. John's Road  
Epsom  
Surrey RH1 6HF

Only local members required as a start. New club with limited free membership, monthly newsletter etc.

### WALES

#### Bridgend

Mr. Bonfield  
3 The Glen  
Deloed  
Bryancroft CF32 9LX  
Mr. Bonfield is the chairman of the Bridgend & District Micro-Computer Club which meets every Wednesday at 7pm at the Abercromby Miners Welfare Hall. You may write to Mr. Bonfield but he cannot guarantee a reply to every letter.

### Cardiff

Hywel Francis  
8 Asalee Close  
Cyncoed  
Cardiff

Hywel Francis would like to extend an open invitation to anyone interested in a club in the Cardiff area. You may contact Hywel direct or leave your name and address at Steve's Computer Company, Castle Arcade, Cardiff.

### OVERSEAS

I have had a letter from a person in Thailand who would like to know if there are any other users out there. If you are in Thailand, please contact me and I can put you in touch.

*Betty Doyle*

# READERS' CONTRIBUTIONS

The first contribution this month is from Mrs. Pam D. Aron for Ramcomms Ltd., 21 Wycombe Lane, Woodburn Green, High Wycombe, Bucks, who has been kind enough to present an additional information sheet on Pixel Editor. This applies to the Multi-Coloured Print Routine and the sheet is printed below.

## Technical Appendix B (Multi-colour print routine)

Having experienced problems in trying to use MCPR (particularly when varying the character set used) the following information has been discovered and may be of use to anyone else experiencing similar difficulties.

**MCPR parameter area layout** 115 bytes are committing at address: A+3 (p. 26) or A1+2 (p. 16)

Locn	Other refs	Pages	Description of content	Value set to at load
A+2	A1+2, DX	18,28, 24,28	X-co-ordinate (theoretical range 0-255)	128

A+8	GL	29	Grid character set height (= rows)	8
A+9	GN	29	Grid character set width (= PMODE3 addr. elements)	8
A+10	—	—	Number of characters across the grid 0 = integer of 128/GN, as when Pixel editing	21
A+11	—[RSP]	—	Required graphics display line spacing (rows)	12
A+12	—	—	Fixed graph display char. spacing graph (PMODE3) + 21	12
A+13	A1+13	18,28, 25,29	End of line character (not the flag "manual" = " " but shift & " )	96F
A+14	—	—	"Normal" foreground colour for the character set (= internal code = Pixel 01 code = 1) (the colour for the current PMODE3 element being displayed in this, it is the current Basic foreground (\$B0) unless colour switch has been requested (A+15)	2 (blue / magenta)
A+15	—	—	"Normal" background colour of the char. set when created (internal as above) If the colour of the current PMODE3 element being displayed is this, it uses the current Basic background colour (\$B0)	1 (ie flow 0x0F)
A+16	—	18,28, 26,31	Colour switch code	0 (\$40)

A parameter GSP (p.26) is mentioned. I think that the relevant reference should be to locations 58A, 58D (base address of current graphics page)

Also, when using Pixel Editor, should the background colour selected be colour code 4, as the grid lines are in that colour regardless. The system may appear to be "hanging" particularly if a large grid size has been selected, but it is in fact initializing the screen without you being able to see it doing so and patience is eventually rewarded by the "cursor" appearing.

The competition to draw 'the star in the east' produced some very good entries and we wish we had space to print more than six. Our winning entry from Graham Bell exploits the LINE command to produce a star with a graceful and symmetrical shape.

```

6 REM STAR ---- GRAHAM BELL
10 PMODE 4,1 SCREEN 1,1 PCLS 8 COLOR 1,0
20 B=64 C=128 D=36
30 FOR A=44 TO 128 STEP 4

# GEC DRAGON

## DRAGON DATA AND GEC

GEC at Stoke Poges

The announcement that GEC had taken over the sales and marketing of Dragon computers and software from ICL February 1984 has opened up a completely new field for both operations.

For Dragon it means that the resources and reputation of Britain's biggest name in the field of electronics and electrical equipment of all kinds has been put behind our company's business.

For GEC a company concerned with the marketing of consumer electrical and electronic leisure and entertainment products, it adds the range of Dragon computers and software and extends the outlets from which they will become available. With new and exciting products planned for the year, access to more and more customers can only mean good news.

Let's take a look at the company with whom Dragon has been allied.

Quite literally GEC's products and expertise range from the depths of space to the depths of the earth, from giant power generating equipment to handy sized telephones, from an integral role in national and international defence, to leisure entertainment of TV and video.

The General Electric Company plc (GEC) is Britain's biggest electronics and electrical company and ranks amongst the best in the world. US-owned and managed, GEC employs 132,000 people in the UK and 41,000 overseas. It has 150,000 shareholders. Turnover at £5,454 million has nearly doubled in the last five years. The company's financial position is extremely strong and in 1982/83 pre-tax profits reached £670 million. During

the same year the Company spent £368 million on capital expenditure and £530 million on research and development and engineering new products.

GEC operates in a diversified way, allowing the management of its many operations into the mainstream freedom to run their businesses. Amongst the businesses are many famous names such as Marconi, Ruston Proctor, Hotpoint, Zenith, Express Lift and W & T Avery.

GEC is Britain's largest exporter of capital goods and last year shipped to customers overseas equipment worth £1,143 million.

Dragon Chief Executive and Managing Director, Mr Brian Moore, speaking about the GEC involvement said:

"We are very excited about the prospect of integrating our range with the well established consumer electronic products marketed by GEC. The whole British consumer electronics is growing at a tremendous pace. Our Dragon products have been very successful, we achieved record sales for our current home computers — and we have new products coming on stream which we expect to do equally well. These new products will strengthen our position in the home computer market as well as moving us into the accelerated growth area of professional and small business usage."

Mr Ron Bosario

Mr Ron Bosario, Chairman GEC McMichael said: "The marketing management with Dragon Data following so closely on the acquisition of the Ayr Viewdata business significantly strengthens our position in the fast growing home electronics marketplace". The relationship between GEC and Dragon will enable us to further strengthen our product range and utilise the skills and resources of both companies to the full.

Dragon Data believe that this arrangement with GEC will lead to a bigger and better service for customers, but don't forget that Dragon's Customer Support Department will continue to help and advise you in any way possible.

# NEW SOFTWARE FOR THE DRAGON

## SPRITE MAGIC

Sprite Magic is quite simply the best Dragon utility available on the market today. Merlin Micro Systems have accomplished the seemingly impossible by giving the Dragon Sprite the ability to use graphics. Sprites (for those who have been on another planet for the last year) are independent graphic objects that can be put into motion by a single command and return a special value when hit.

There are 41 new commands which form an extension to the Microsoft Basic supplied with your Dragon computer and can be used within a Basic program. There are more features written into package than those supplied by some quite a few sprite routines. There is for example, an excellent feature called MAZEON which enables you to construct a maze around which your sprites must travel. These sprites can be made to chase or flee from the user's sprite. Do I hear the tale of this game being whispered in the background?

This documentation is quite helpful so don't expect to be using Sprites as soon as you purchase the package, but after carefully reading the commands section you should be ready to experiment on your own. If you cannot wait that long then there are seven Demonstration programs on this tape several of which could have made games in their own right. A listing of these will give great insight into the techniques of using Sprites.

There is now no need for those amongst you who are unfamiliar with machine code, to produce useless games. Now with this package and a few lines of Basic, Pac Man and Frogger will soon be flashing across your screen.

**Sprite Magic is available now on mail order from Dragon Data. See separate insert.**

## SPRITES FOR THE DRAGON

- Up to 128 non-destructive sprites
- Automatic scrolling
- Automatic maze running mode
- Text encodes
- On-demand character set
- Enhanced sound facilities
- Comprehensive manual

- Size single plot to 1600 plots
- Automatic joystick/keyboard control
- Collision detection
- True lower case ASCII
- Auto-repeat keyboard
- Dozens of powerful new commands
- Six free demonstration programs

Some time ago, we decided to add text painting facilities to the Dragon's sprite system. Although it took three weeks of hard work we did it, for all five PRICES. We made the characters as definable but we did not put them in sprites because they are not, they're definable characters. Then we decided to add some sound effects and user-definable sounds. After another week or so, we had done that as well.

Next, we thought we would give the Dragon some sprits. We required multi-coloured sprites of any reasonable size or shape and we wanted to be able to move them without disturbing whatever else might be on the screen. We were keen on being able to control sprites from the keyboard or joystick with just a single command and we thought it would be nice to be able to fire sprites with the joystick buttons. The sprite system wasn't as well as it looks like. We thought, so we would have to have collision control. Also, we wanted the sprites to be fast, versatile and easy to use, with lots of hard work that the control program would take care of. All the sprites were and what they were doing. Another feature we were to include an automatic maze-running feature where all the sprites chase for run until it finds a particular sprite, so that it would be easy to write THAT kind of program. Then we thought we would like to have easy animation, preferably looked after automatically by the sprite handling system. Finally, just to make the whole idea totally impractical, it would have to be driven entirely from Basic, without any tedious Peeking and Poking.

We did it, it took months, but we did it. The author of the best-selling Dragon games in a recent best-sellers list has described Sprite Magic as the best piece of software he has ever seen. P.C. Weekly said "excellent" and "superb". Modesty forbids, but we think it's pretty good too.

Phone your Access/Visa number or send cheque or Postal Order for £17.95 (p.p.)

# DRAGON ANSWERS BACK

## Question

Can you tell me if it is possible to load a number of short programmes from tape and then to merge them without losing them?

## Answer

It is possible using a BASIC routine we have available. Unfortunately, this routine is too long to be listed here; should you require further details, please send a SASE to our Customer Support Department stating what you require.

## Question

I have a Dragon 64 computer and I wish to download via RS232 a program to my Dragon from a large machine which also has an RS232. Is this possible without using specialist software?

## Answer

This is possible using the following routine:

```
10 ' TO DOWNLOAD A PROGRAM FROM
    ANOTHER COMPUTER SELECT SERIAL
    OUTPUT ON THE MASTER COMPUTER AND
    LIST PROGRAM TO SERIAL PRINTER THEN -
20 POKE&H16F&B&A:POKE&H16C&A&H12
30 POKE&H16C&13:REM ONTO DRAGON 64
40 ' THE PROGRAM WILL APPEAR ON THE
    DRAGON SCREEN AND WILL BE CRUNCHED
50 ' ONCE LOADED PRESS RESET AND LIST
    PROGRAM
```

This routine configures the Dragon to accept input from the RS232 and use it as it would any keyboard input.

## Question

I would find it very useful to have a hard copy of everything that my Dragon prints on the TV screen. Is there a routine to direct the output to printer and screen simultaneously?

## Answer

The following routine should achieve the desired results:

```
POKE &H16E&A&B
POKE &H16E&A&B
POKE &H167&A&B
TO CANCEL, POKE &H167, &H30
TO RE-START, POKE &H167&A&B
```

## Question

Sometimes when typing in a listing from a book or magazine, I have come across a pound sign. However, this symbol is not on my Dragon's keyboard and I can find no way of getting it on the screen. Can you help?

## Answer

The confusion arises because printers are not entirely standardised in the way they interpret character codes. The Dragon assigns code 26 to the "£" symbol. On many printers, this code is altered to the "C" sign.

If you encounter a "C" sign, substituting a "£" will allow the program to run correctly.

## Question

I have read that the Dragon 64 incorporates an auto-repeat facility for the keyboard. Is there anyway that I can implement an auto-repeat on my Dragon 32?

## Answer

All that is needed is a subroutine to set the keyboard rollover table every time an auto-repeat is required. The rollover table is stored in locations &H1160 to &H1169 and can be set by POKing each location with &H0F. Try running this short BASIC program as a demonstration:

```
10 CLS
20 PRINT "HOLD DOWN ANY KEY"
30 FOR I = 0 TO 9
40 POKE &H1160 + I, &H0F
50 NEXT I
60 AS=INKEY$:PRINT AS;
70 GOTO 30
```

## Question

I am interested in using a light pen with my computer, but I am not exactly sure of what they do. Please explain their function and tell me when I can get hold of one for the Dragon.

## Answer

A light pen is a device used to access the intensity of light emitted by any point on the TV (or monitor) screen. It is connected to the computer via one of the joystick ports. If a light pen is pointed at a particular point on the screen, the computer is able to calculate which spot on the screen is being referred to. Thus, with suitable software, they can be used to choose between options displayed by the computer, or even to draw directly on the screen.

We ourselves stock a versatile light pen which retails at £2.95 and is available through mail order.

## Question

Although I find that most Dragon 32 software runs perfectly on my Dragon 64, I have had some difficulties with *Breakout* and *Middle Kingdom*. Is there anything I can do to make them run as they should?

## Answer

Both programs will run perfectly if you make these simple modifications:  
*Breakout*: Load Game. Once loaded, type

```
POKE &H1E2A&A&A
EXEC
```

*Middle Kingdom*: Load Game. Once loaded, type

```
POKE &H1E00&A&B
POKE &H1E00&A&B
```

# A QUALITY LIGHTPEN

for the DRAGON 32 microcomputer

## \$25

Inclusive of VAT. P&P. Two different drawing programs provided free with each lightpen. SETCH and SHAPE-CREATE. SETCH is a superb high resolution colour drawing

program allowing both precise drawing and freehand sketching pointing into SHAPE-CREATE is a high-resolution binary shape drawing program

### SUPERB PROGRAMS

- Topic storage of your work
- Basic documentation
- User manuals provided on tape and on printout

Also available for - VIC 30 CBM-64 or BBC B. Please state your requirements when ordering.

Send cheque or P.O. for £25.00.

Dept D W 1 Datapen Microtechnology Limited,  
Kingslane Road, Overton, Hants. RG26 3JB

Or send S.A.E. for details. Now available from good computer shops.

### SUPERB PERFORMANCE

- Intuitive lightpen lighting
- Responsive different colours
- Program accessible LED lamp module
- Switch for program control

It differs from all other lightpens available for the Dragon in that it is a far more sophisticated beast. This program (Setch) clearly demonstrates the superiority of the Datapen!

Popular computing Weekly  
Dec 1985

## SHARDS proudly introduce for the Dragon 32

# "The Mystery of the Java Star"

### THIS IS AN EDUCATIONAL ADVENTURE OF EPIC PROPORTIONS

Taking up over 100K of memory, including 80K of high resolution graphics, and loading in four parts, this adventure is designed to provide hours of family fun, filled with puzzles, challenges and interesting facts. Also, with three levels of difficulty and a score sheet at the end, this is a game you can play again and again, to try and beat your last score.

You have discovered an old map and a ship's log book, indicating the existence of magnificent treasures, including a mysterious ruby, the Java Star, aboard an 18th-century sailing ship, that sank in the Caribbean. You must mount an expedition, gathering all the necessary information, then search for the shipwreck and the hidden treasure. Many skills are needed to solve this mystery, making it the ideal adventure for friends or family to play together.

ALL THIS  
FOR ONLY  
**£7.95**

AVAILABLE NOW AT ALL GOOD STOCKISTS OR BY PHON-  
ING THROUGH YOUR ACCESS/BARGAINARD ORDER TO

SHARDS SOFTWARE, 188 ETON ROAD, LUDLOW, ESSEX Q11  
2LD

# MACHINE CODE CORNER

## MATHEMATICAL SKETCH PAD

This is for the many Dragon users who need to sketch graphs 'O' and 'A' level mathematics students can explore the behaviour of functions with this program irrespective of whether they can program or not.

BASIC allows you to define on-line functions. The statement

```
DEF FN(X)=2+X+X+2+X+1
```

allows future lines of program to refer to (for example) FN(3) which would equal  $2^2+2+2^2+1=10$ . To write an all purpose program allowing users to specify such a function, enter the full line must be written by the user or we need an effective way of entering such a line from an INPUT statement.

To do this, we need to know how such lines are stored in the RAM of your Dragon. A short program is outlined to uncover the secret:

```
10 ST=256+PEEK(126)+PEEK(127)
20 REMXXXXXXXX
30 FOR I=ST TO ST+255 PRINT PEEK(I) NEXT
```

Line 10 finds the position in RAM of the next executable statement, in this case line 20, and line 30 produces the numbers 0 255 510 765 1020 1275 1530 1785 2040 2295 2550 2805 3060 3315 3570 3825 4080 4335 4590 4845 5100 5355 5610 5865 6120 6375 6630 6885 7140 7395 7650 7905 8160 8415 8670 8925 9180 9435 9690 9945 10200 10455 10710 10965 11220 11475 11730 11985 12240 12495 12750 13005 13260 13515 13770 14025 14280 14535 14790 15045 15300 15555 15810 16065 16320 16575 16830 17085 17340 17595 17850 18105 18360 18615 18870 19125 19380 19635 19890 20145 20400 20655 20910 21165 21420 21675 21930 22185 22440 22695 22950 23205 23460 23715 23970 24225 24480 24735 24990 25245 25500 25755 26010 26265 26520 26775 27030 27285 27540 27795 28050 28305 28560 28815 29070 29325 29580 29835 30090 30345 30600 30855 31110 31365 31620 31875 32130 32385 32640 32895 33150 33405 33660 33915 34170 34425 34680 34935 35190 35445 35700 35955 36210 36465 36720 36975 37230 37485 37740 37995 38250 38505 38760 39015 39270 39525 39780 40035 40290 40545 40800 41055 41310 41565 41820 42075 42330 42585 42840 43095 43350 43605 43860 44115 44370 44625 44880 45135 45390 45645 45900 46155 46410 46665 46920 47175 47430 47685 47940 48195 48450 48705 48960 49215 49470 49725 50000

The two bytes 38-42 determine the position in RAM of the next line. 0 255 specify the line number (255 is the usual 128 is the "token" for "REM" followed by 0 255 is 510 is the ASCII code for "X"), and the end of the line is marked by a zero.

The most important aspect of this is the notion of "tokens" representing the key words of the BASIC language. If we replace line 20 with

```
20 DEF FN(X)=X+X+X+X+X+X+X
```

and run the program again, we find the following tokens: DEF(152) FN(126) = (200) + (106) - (106) \* (197) / (766) and \* (766)

With this background information we can begin to see how to use the characters of a string P# to create the appropriate line of program — scan each character to see whether it should be a token and if so POKE the appropriate token into the program line; otherwise POKE the ASCII value instead.

In the following program, subroutine 120 does precisely this together with the necessary tokens P#

```
DEF FN(X)=
```

and to finish the definition, the characters 66 ( ) and 120 (END) are POKE'd. P#M is useful statement to end the function, because the remainder of the line is then ignored.)

```

As it stands, standard functions like SIN, COS etc. cannot be used, since no provision has been made to translate these into tokens. Nevertheless a wide range of graphs can be sketched using this program. All you need do is to input the required function, together with the range of x values you want the graph to cover, and the number of points (up to 250) you want calculated in the range. The program lists the values of the function at the appropriate points; you can halt the scroll using 304+P#(3) and give the corresponding range of function values. When a key is pressed the graph is drawn. Where the range of x or y values includes 0, an axis is drawn.

The standard functions are represented by two bytes — P# (256) followed by 127+n, where n is the number of the function in the table of standard functions, which

starts at address \$B1 CA in ROM. For example, \$IN is 756 followed by 136, because \$IN is the seventh function in the table. To see a list of the functions and their corresponding numbers, run the following program:

```
10 J=126:J=&HEXCA
20 PRINT J;J=J+1
30 J=&PC000:J=J+1:IFC=126THEN$D0
40 PRINTCHR$(J);GO TO$D0
50 PRINTCHR$(J-126)
60 IFC=&B0000 THEN$D0
```

To include these functions, we need a routine which analyses the string \$S and searches the table to match sequences of characters with the standard function words. This can be done in BASIC, but the response time is rather poor. The following machine-code program does the job a lot faster:

```

      MLETS $OU RETURN+1
      NWORDS$OU RETURN+2

The program is written in Pseudo Independent Code (PIC) which means that the same code will work anywhere in RAM. PIC is very easy to write for the 6800 and will be discussed in detail in a future article. For those who are using the DREAM Editor/Assembler, it is convenient to assemble the code starting at address 100001 — this is available when DREAM is located at the top of RAM and is not needed by the BASIC program. Before loading DREAM type (CLEAR) 100 100000. The program will then automatically assemble from byte 100001.

The code can, of course, be PORG'd into RAM using a BASIC program — simply put the sequence of bytes \$C 10 CC 40 60 10, A0 01 into data statements and run a program to PORG them in, starting at any convenient position above 100000.

Lines 1-9 search the simple variable space indicated by the contents of \$100 for \$S. Line 6 loads the 0 register with the "length" of \$S and line 11 loads Y with the address of the first byte of \$S. Line 12 loads X with the address of the function table. There are 34 function words (line 10).

Lines 10-20 check for a first letter "match" between the characters of \$S and the table. If one is found, lines 21-26 check the rest of the word. Lines 31-34 replace the character string with the corresponding token and close up the resulting gap. The final part of the program deals with strings of letters which are not functions (i.e. variables).

Two techniques are used which may be new to some readers. The brackets in lines 40 and 50 indicate "indirect addressing". For some assemblers these should be typed as square brackets (not in DREAM). Lines 58 and 63 are Stack operations — the contents of register U are PUSH'd onto the System Stack and later PUL'd back into register Y. Stack User and System Stacks may be used for the sort of temporary storage of values, and a sound understanding of how the Stacks work is invaluable for the serious machine-code programmer. These techniques will also be discussed in a future article.

(Continued on page 17)

# YOUNG USER'S PAGES

## PLEASE REMEMBER THIS DRAGON

As the programs you write become more interesting you see how much you need to be able to put special information into your program — the sort of information which enables the same program to do different things. This sort of information is often described as DATA (single-driven). The hint we are going to look at some of the different ways we can get data into the Dragon.

Most people enjoy the sort of program which requests you to respond even if only to enter your name. Both computer games and arithmetic tests require a response. This type of program is called INTERACTIVE.

Can you teach Dragon your name? One way of getting your name into Dragon's memory is to use the INPUT command. After the command you must give a variable name so that whatever is put in can be stored and recalled. Here is an example.

```
10 CLS:INPUT NAMES
20 CLS:PRINT "HELLO ", NAMES
```

When you RUN this line program you see a question mark on the screen. When you type your name and press **ENTER** your name is put into the variable NAMES. The next line clears the screen again and prints HELLO followed by your name. Of course your name is made up of letters and must be stored in a string variable which has a \$ sign after it. What if your Dragon wants to know more about you?

```
10 CLS:INPUT NAMES,AGE
20 CLS:PRINT NAMES," YOU ARE ",AGE," YEARS OLD."
```

This time Dragon expects two pieces of information, one string and one number. By entering just your name Dragon waits for more. You are supposed to enter your age as a number. See what happens if you enter it as a string.

```
10CHR$
20TWELVE
30REDO
40CHR$12
50CHR$ YOU ARE 12 YEARS OLD
60
```

When you use REDO you must re-enter the whole input.

When you want to enter something during a program your program should always wait to enter. A question mark on its own looks rather demanding and rude. The INPUT command lets us do this easily. The prompt is written in quotes and is followed by a semi-colon. Put in a new line 10.

```
10 CLS:INPUT "NAME,AGE "; NAME,AGE
```

Only one prompt is allowed in any one line so NAME and AGE must come in the same prompt. Suppose you wanted to enter an address.

```
30 INPUT "ADDRESS"; ADDRESS$
40 PRINT ADDRESS$
50 RUN 30
```

```
ADDRESS1 30 RAM STREET
EXTRA IGNORED
30
```

All that is stored in ADDRESS\$ is 30. The computer took the comma in the address as separating two variables. We can overcome this by using LINEINPUT. Change line 30.

```
30 LINEINPUT ADDRESS$
40 RUN 30
50 RAM STREET
60 RAM STREET
```

Now the whole address is in ADDRESS\$. But there is a snag — there is not even a question mark to remind us to enter something. You can add a prompt (with question mark) as with INPUT or supply your own prompt using PRINT.

```
25 PRINT "ADDRESS ? "
```

Now type RUN30. You see we have our prompt on one line and the input on the next. To get them on the same line you need a semi-colon at the end of line 25. In fact we can place the prompt and the response whatever we want on the screen by using PRINT\$: Here is a new line 25.

```
25 CLS:PRINT$:100,"ADDRESS ? ",LINEINPUT
ADDRESS$
```

Of course you can use this with the ordinary INPUT too. Sometimes it is useful not to have the question mark for input. Use LINEINPUT instead but remember you can input only one variable and it must be a string. If you want a number, put it into a string first and convert it using VAL. = 0

```
60 PRINT "WHAT IS THE NEXT NUMBER 1:2:4:8 ";
80 LINEINPUT N$N=VAL(N$)
90 IF N=16 THEN PRINT "RIGHT"
100 RUN 60
```

Now this is all very well but when we use either of the INPUT commands that input is printed on the print screen. If we have a display on the high-resolution screen or on the print screen which we want to alter without printing we can use INKEY\$. This key which has the next key pressed but doesn't print anything. We can make a very useful subroutine with this. Type NEW first to clear away the old program.

```
NEW
1000 K$=INKEY$:IF K$="" THEN 1000 ELSE
RETURN
```

When your program meets this subroutine it puts into K\$ the next value of INKEY\$. If there is nothing there it goes back and tries again. If a key has been hit it returns to the program and that key is shown in K\$. Here is a demonstration.

```

10 PMODE3:1 SCREEN1:1 PCLS
20 GOSUB1000 N=VAL(3)
30 IF N<3 AND N>3 THEN COLOR N
   DRAW "220:220:220:220"
40 GOTO20
1000 K$=INKEY:IF K$="" THEN 1000 ELSE RETURN

```

When you run this program you will see a blank screen. When you press a number between 1 and 3 a square appears. You can change its color by pressing a different number. Press <BREAK> to stop.

You can tell print letters on the screen. The next little program uses the same subroutine and prints whatever you type (both forwards and backwards). Press <ENTER> to stop.

```

10 CLS
20 GOSUB1000:IF K$=CHR(13) THEN END
30 PRINT(432-N)K$:PRINT(473-N)K$,
40 N=N+1 GOTO20
1000 K$=INKEY:IF K$="" THEN 1000 ELSE
   RETURN

```

Subroutines are very useful when you want to do the same sort of thing many times. Perhaps you want to draw lots of circles. You might have a program like this:

```

10 PMODE3:1 SCREEN1:1 PCLS
20 X=100:Y=50:H=30:C=2:H=1.5:I=1 F=0
30 GOSUB1000:GOSUB1000
40 END
1000 K$=INKEY:IF K$="" THEN 1000 ELSE
   RETURN
1000 CIRCLE(X,Y),C,H,S,F:RETURN

```

When you RUN this, you will see a circle. When you change R you will see a circle with a different radius. Let's do this with a new line.

```
40 R=50 GOSUB1000:GOSUB1000
```

Pressing any key sends the program to the next stage. First one circle, then the next.

Now want to do a lot of circles we can READ our data (the values of X,Y,R) from DATA statements. Simply change lines 20 and 40 and add the data line:

```

20 READ X,Y,R,C,H,S,F
40 READ R:GOSUB1000:GOSUB1000
100 DATA 100,50,30,2,1,1.5,0

```

We can easily add more lines, like line 40. In the following program we have used this technique for the whole program. The subroutines themselves read the data they require.

```

0 REM EASTER CARD 1
10 PMODE3:1 SCREEN1:1 PCLS
20 GOSUB1010:GOSUB1000
30 PRINT(125,100):G
40 GOSUB1020:GOSUB1000
50 GOSUB1010:GOSUB1010
60 PRINT(100,50):GOSUB1000
70 GOSUB1010:GOSUB1010:GOSUB1000
80 GOSUB1000:GOSUB1010:G
90 READ A$:GOSUB1040
100 DATA 125,100,30,4,1,1.5,1
110 DATA "E,5,20,5,20,30,19,20,0"
120 DATA 125,100,30,4,1,1,0

```

```

130 DATA 125,100,40,4,4,1,0,0
140 DATA 175,75,4,4,1,0,1
150 DATA 125,75,4,4,1,0,1
160 DATA "E,M,10,50,N,5,40,0,0,0"
170 DATA "E,M,10,4,75,N,0,0,0"
180 DATA T(10),0,0,0,0,0
1900 K$=INKEY:IF K$="" THEN 1000 ELSE
   RETURN
1010 READ X,Y,R,C,H,S,F
1020 CIRCLE(X,Y),C,H,S,F:RETURN
1030 READ A$:DRAWA$:RETURN
1040 READ T$
1050 DRAW "C4" + A$:PLAY T$:GOSUB1000
   DRAW "C2" + A$:GOSUB1000:GOTO1000

```

Just keep pressing the space bar. To continue on Easter theme we have another program which looks almost the same but has different data. The special thing here is that the data tell which subroutine to go to next.

These programs are easy to build up but rather difficult to follow once you've forgotten what you wrote.

```

0 REM EASTER CARD 2
10 PMODE3:1 SCREEN1:1 PCLS
20 FOR I=1 TO 20 READ N
30 ON N GOSUB 1000,1010,1020,1030,1040
40 NEXT END
100 DATA 2,125,100,40,4,1,1,0,1
110 DATA 3,"E,5,20,5,20,30,19,20,0"
120 DATA 2,125,50,30,4,1,1,0
130 DATA 3,175,75,4,4,1,0,1
140 DATA 2,100,50,10,4,4,1,0
150 DATA 5,0,0,2,1,4
160 DATA 5,125,100,2,1
170 DATA 2,175,75,4,4,1,0,1
180 DATA 2,100,75,4,4,1,0,1
190 DATA 3,"E,M,10,50,N,5,40,0,0,0"
200 DATA 3,"E,M,10,4,75,N,0,0,0"
210 DATA 4,T(10),0
1000 K$=INKEY:IF K$="" THEN 1000 ELSE
   RETURN
1010 READ X,Y,R,C,H,S,F
1020 CIRCLE(X,Y),C,H,S,F:RETURN
1030 READ A$:DRAWA$:RETURN
1040 READ T$
1050 DRAW "C4" + A$:PLAY T$:DRAW "C2" + A$:
   GOSUB1000:GOTO1000
1060 READ U,V,P,Q:PARTIAL U,V,P,Q:RETURN

```

Just for fun we have here a program which demonstrates INKEY\$. The arrow keys control the cursor and you can make a draw in different colours with the numbers 0 to 9. When you press the space bar it stops drawing and you can move about the screen without altering your picture. You can choose a screen colour in the start or, by just pressing <ENTER>, you can select a grass and sky background.

(Continued from page 10)

To integrate this code into the BASIC program just insert the following line:

```

75 EXEC10001
(Loading up assembly at 10001)

```

When the machine code is loaded, the program will now allow the use of any of the Standard Functions.

# SOFTWARE REVIEWS

For this edition of Dragon World we have concentrated on the educational programmes available for the Dragon 32 and 64. We have used two different independent sources to review the software — Mr John Fulsie, Youth leader of the John Pound Youth Club in Portsmouth very kindly for us reviewed Words Words Words, Number Guesser and Clarity. The other reviewers were two young girls, Kate and Rebecca, with a little help from Kate's oldest sister.

## The John Pound Youth Club

This was opened in March 1980 to help meet the needs of youngsters with educational learning difficulties. It has a membership of over 30 with a very wide range of activities offered to the youngsters, including the access to a Dragon 32 Home Computer. For this reason we asked John, with the help from the members of the Club, to review some of our educational range of software.

## REVIEW

I have reviewed the three items of software in relation to their use with students designated as SEN (i.e. mildly educational sub-normal, aged 16-19). Their reading ages range from 8-10 years and number ages from 5-11 years.

## Words, Words, Words £10.95

It is a mixture of instructional and inventory software designed for young children to use. It can be best used by the teacher and pupils working together and is at its best with smaller groups (i.e. up to 5 pupils).

The instruction manual is well written and supplies the teacher/user with an introduction containing the objectives, intended skill areas covered, loading procedures, use of the programme including correction procedures and a very useful dictionary of the words used.

Basically the programme enables the user to build up a scene (e.g. street, house or castle) by correctly spelling the names of objects presented on the screen.

Once the user has chosen which scene he wants to begin his story, objects begin to appear on the screen. The user then has to correctly spell these. The programme allows two mistakes before showing the correct spelling. If all the objects are spelt correctly a reward is given — the 'scene' comes to life with some of the objects doing various things.

The programme was popular with the students across the ability range and only one concern was noted. Although the graphics are good, they are not as good as the 'Hide and Seek' programme from ASL which the students have used extensively. The students found it difficult to recognise some of the objects (e.g. the boy, the girl, the balloon) and it would seem that a slight enlargement of detail would help a great deal adding to the quality of the programme.

While helping the students to practice the main achievement was in getting them to use their imagination and stimulating ideas and interest for story writing.

## Number Guesser £10.95

Very popular indeed the students because of the 'casual' style of presentation and a very useful programme for students with learning difficulties because of the range of difficulty levels and the ability of the programme to drop to an easier level should the user fail to successfully complete one level.

The idea of the game is quite simple, but the actual operation requires more skill than it appears at first.

The user has to move a 'guesser' around a cross-type board containing numbers that have a +, =, < or > sign next to them. The user chooses a number between 10 and 9 999 (the lower the easier) and then the computer selects another number. The user then has to use his guiser to test the numbers required to make up the difference between the chosen number and the computer selected number. As if this isn't hard enough, you are racing against time as your energy store is decreasing with time and each number you guise. At the higher levels 'scrambles' appear which, if hit by your guiser, randomly change the selected number thereby forcing the user to rethink the strategy for making the new number.

The students soon found that a pencil and paper were essential for planning their 'routes' before starting the game.

The programme also includes a Self-Test option with which the user can test how much progress is being made in using numbers. It consists of ten questions varying in difficulty according to the level of the last 'guiser' game played, which are answered in the shortest possible time.

A highly entertaining interactive game which while making it fun to practice number skills also involved the students in using strategy and forward thinking skills.

## Clarity £10.95

Another popular programme with the most able students.

This one is really playing with numbers! Clarity is a pocket calculator whose circuits get damaged by use. It is the job of the player to repair the circuits by making the number patterns that have been damaged. In the Basic game the player can only use the numbers 3 and 5 and the +, =, < and > signs to construct numbers but in 'Challenge' you can choose your own two numbers to manipulate.

The programme really tested the students' addition and subtraction skills to the full and new techniques, number patterns and relations were found. Like Guesser the programme also encouraged the students to develop and explore their own strategies usually by trial and error at first.

This revelatory programme was best used by students on their own with periodic supervision and was a help in giving many of the students initial confidence in discovering their own ability to successfully manipulate numbers.

## Summary

Most of our students are naturally turned off from literacy and number work because of their learning difficulties and the biggest advantage of the computer and educational software has been the confidence they gain in being able to 'play around' with words and numbers and to explore patterns, all at their own pace without the pressure of time or a teachers' patroniser. (The Dragon hasn't blown a fuse yet!)

Kate and Rebecca are six years and seven years old respectively and attend Prestegne Primary School in Mid Wales. They reviewed three of Dragon Data's new educational software titles for Dragon World, Facemaker, Children From Space and Shape Up. Each of these titles are designed specifically to reinforce one particular aspect of a child's education.

## REVIEW

### Facemaker £10.95

This was Kate's and Rebecca's favourite program. The aim of Facemaker is to draw a face by typing certain commands into the computer. The girls took it in turn to draw each other and, whilst finding the pictures very amusing, took it quite seriously. As a result they did not find it too boring (or boring).

Some of the vocabulary had to be explained — words such as 'clerk' and 'bulbous'. The program did prompt certain questions, such as why certain relatives were glasses, and these were discussed.

The only criticism that came from the girls was that they did not understand all the words used, but the problem was soon solved.

### Children From Space £10.95

The two girls found this considerably harder than Facemaker and as a result found it tedious. The main reason was that they were too young to enjoy it. The program demands grammatical accuracy and is really suited for children slightly older than Kate and Rebecca.

The game has four a puzzles in which different aspects of English are explored — correction of common spelling mistakes, changing of tense, order of jumbled sentences, choosing the more appropriate of two words to fit into a sentence.

This particular piece of software was slightly too advanced for Kate and Rebecca.

### Shape Up £10.95

In contrast to Children From Space, 'Shape Up' was a little too easy for the girls. It was very enjoyable but the girls mastered it a bit too quickly.

The four games in this title are designed to introduce and familiarise children to different shapes and sizes. Each game is slightly harder than the last. The clever use of colour and moving graphics means that the children's interest was kept. However, it was too easy for the two girls and is more ideally suited for the younger child.

## BRIDGE

Bridge Master with its excellent graphics and presentation makes the player feel that he is participating in a bridge game.

The outstanding features are:

- (1) The player can elect to bid either the North or the South hand and, as declarer, play each of 100 bridge hands.
- (2) Before making his first bid, he may elect to have the computer display the point count and honour trick valuation of his hand.
- (3) At the end of the auction the computer will, if requested, give a review of the bidding.
- (4) At any stage during the play of the hand the computer may be asked to remind the declarer of the contract and display the number of tricks made to date.
- (5) At the end of the play on each hand the computer will, on request, automatically re-run through the hand showing the correct bidding and play.
- (6) Although the operator may make any bid, or play any card he chooses, the computer will accept only those bids and plays that are correct. The beginner (unaided) follows necessary instruction whenever a mistake is made, and errors are not compounded. At any time during the bidding or play the computer may be asked for advice and will respond with the correct action.

The session consists of a cartridge and cassette containing 100 different hands. It is a course of instruction in both bidding and play for the beginner and an entertainment and challenge for the intermediate player. There are two manuals. The manual of instruction contains a short introduction to Bridge, a Summary of Opening Bids, a Hand Valuation Chart, a Scoring Table and a Glossary of Bridge Terms. The second manual contains instruction in the form of comments on the bidding and play for each of the 100 deals.

For use with the Dragon 32 and the Dragon 64. joystick optional. Recommended retail price is £29.95.

## THE FLEX OPERATING SYSTEM

It means speed! The speed where the micro is always  
doing basic computer programming a lot and you  
can see the speed of the system.

After 10 years of research, it is possible to do 100  
times faster. Compuserse is now 'The Flex' is  
flexible.

Flex has already loaded the 100,000 track  
microdisk with about 100,000 files of data. It is  
possible to do this.

Flex is an elegant, friendly and efficient disk based  
operating system. It is supplied with a 100,000 track  
microdisk, an editor and an assembler.

It is very easy to use. It is very easy to use. It is very

## DRAGON USER OF 1983 COMPETITION

We had no idea that Dragon owners were so inventive. The entries to our 'User of the Year' competition were of such a high standard that we had to award five Dragon 64s!

Of course there had to be an overall winner, and that honour goes to Tariq Mohammed, a doctor at South Hill Children's Hospital in Manchester. He receives a Dragon 64, plus a large parcel of software.

Tariq works in the Department of Paediatric Gastroenterology and he devised a program to work out the feeds for children who are fed intravenously. The program also provides a print out of instructions for the pharmacy and nurses.

Congratulations to Tariq and we hope he will keep up the good work with his prize.

The other four winners of 64s were equally interesting and inventive. John Wilkinson of Wrexham uses a Dragon 32 to help in his work on fuel and engine specifications at Jaguar Cars.

At an Electronic Control Centre in the West Country a Dragon 32 is helping B. J. Parish and colleagues to display the status of the sub-station breakers. Using high resolution colour graphics and the powerful 16bit 16bit

the Dragon outperformed very much more expensive solutions.

In Cumbria a schoolteacher named Stephanie Fox uses her Dragon to write simple graphics for a partially sighted four year old pupil. Stephanie reports that the pupil's concentration improves remarkably when working with the graphics, which he enjoys enormously.

Carl Hail Winsor at Rachel Hart of Amersham Bucks, who has used her Dragon 32 to help a friend to translate English books into Russian.

Altogether a marvellous selection of users and users who thoroughly deserve their prizes.

The runners up, who each win a Super Dragon Writer

1) cartridge are:

R. Callow, Glenview, Northants

A. E. Church, Wyken, Coventry

Hervé Gueyens, Herenthout, Belgium

A. Dawley, Warwick

A. Farai, Stroud, Gwent

P. Gladwell, Gorton, Manchester

Major T. T. Hatcher, Church Crookham, Hants

William Hart, Leyland, Lancs

A. F. Lee, Westbury-on-Trym, Bristol

T. Martin, East Grinstead, Sussex

H. L. Nymn, Hatnaw, Middlesex

G. Powell, New Inn, Pontypool, Gwent

G. Scullion, Skelmersdale, Merseyside

A. Spence, Weymouth Bay, Northwiltshire

G. Thomas, Dunblane, Perthshire

We intend to feature articles on each of the competition winners in future issues of 'Dragon World'.

## DRAGON 64

### DRAGONS IN DRAGON

Our Production Department had a problem — and an answer to that problem. The problem was scoring information for management statistics — the answer was a Dragon 64. A double disk drive, a printer, a television screen and a little bit of imagination.

The production manager, Mike Lewis, was constantly frustrated by the time and effort his clerical staff had to put in to provide him with the information he needed to complete various management reports. So when the Dragon 64K was launched and later the QSI-8 operating system was developed, he saw the combination as a solution to a problem.

When compiling management information and statistics, the major drawback is the time it takes to access, isolate and update the data. If the history dates, however, on a disk the time and resources saved can be considerable. Mike Lewis had three specific areas where a portable, computerized system appeared to be the answer to the manual system his staff currently used.

The first of these areas was information on the stock test racks. These are used in Dragon Data to test and "burn in" the computer components for a specified

period of time. The information on the number of good and reject boards is obviously essential to the production area. Using BASIC, a database was established to hold daily recordings of such things as loading/unloading times. Now information is immediately available and passed to Quality Control. It is then incorporated in the weekly production efficiency reports.

The second area which was integrated to a computerized system was the production efficiency reports. Using BASIC and the manual information already established on standard hours, a database was established. This enables access to a file of information which, when used in conjunction with daily production reports, forms the basis of a daily and weekly assembly efficiency report. Any area not to standard is immediately highlighted and action taken.

The third area looked at was the one of software control. Although the company uses a main frame computer which has a finished stock file as well as the facility for invoicing accounts, a major expenditure would have been necessary to set up the type of stock control system needed for software. The Dragon 64K in conjunction with QSI-8 would, however, accomplish the same task at a fraction of the cost.

Once this was established a weekly update of production rates for each item enabling a report to be generated indicating on-going sales and total cash value held in stock, stock held on each item, and those items requiring re-ordering. Mike Lewis can now give other units within the organization the accurate information they need to perform their jobs efficiently.

From ideas initiated in the Production Department other departments are now evaluating possible uses within their own areas. We will keep you up-to-date on any further uses of Dragons within Dragon.

## Complete control at your fingertips

The smooth control of the Voltmace delta 3d sprung return joystick is now available to Dragon owners. Each joystick has been individually tested before it leaves our factory, following extensive robot testing to prove the design (we tested it more than a million times). This means that not only will your joystick be strong, tough and reliable,

but it ensures long life, accurate control and with the choice of red or green the buttons, gives instant recognition between the left and right joysticks.

If you are not completely satisfied with the delta 3d, return it to us within seven days for a full refund.

## THIS MONTH . . .

In response to the many requests for a word-processing feature, "This Month," we have reviews of the two word processing packages available (both at and as similar) is required for those packages, we are reviewing a selection of printers.

The review of printers is restricted due to space available this issue, but we hope to review other makes in future issues. If there are any particular models you would like to see reviewed, please contact us at the editorial address.

### "SUPER DRAGON WRITER II"

The first word-processing package to be reviewed is Super Dragon Writer II. This is priced at £59.95 and is available now. The review has been prepared by Doug Bourne of the Dragon Independent Owners Association.

The Super Dragon Writer II word-processing program arrives in the now standard video box which, when opened, reveals a ROMpak and a thick manual. It is at this point that we should our course of action. Does plug in the ROMpak and run the program, or do we read the manual? Well, if you do like me and do the former then you very quickly find yourself reaching for the manual and, in fact, the manual tells you that the best way to learn is by reading and using the information given.

So let us start again. Plug in the ROMpak and switch on. First comes up the colourful title page. By pressing any key we enter the command mode and the display mode of 51 characters per line, 31 lines per screen. This is a big improvement over the small box that we normally see.

The command mode is as its name implies: how we tell the program what we want from it. We now decide whether we would like to alter the display mode for one of the other options. There is the low-res, 32 x 18 display which is the standard display with the standard even-size letters for lower case. The colour can be changed from green to orange. Next, the hi-res displays which are 51 x 21, 61 x 24, 64 x 21, 64 x 24, 85 x 21 and 85 x 24. Also in the 54 displays you can choose narrow or wide characters and, as in the low-res display, the colour can be changed between green or white and inverse. In all the hi-res modes you get true lower case with discenters.

Pressing "BREAK" puts you into the text entry mode in which you can write your letters or whatever. If you make a mistake, you just position the cursor using the arrow keys and type over to correct the error. You can delete characters using the command [CLEAR] key and D.

When you have your block of text, you will want to see it in looks correct before printing so command P gives you the option of printing or window. Asking for window (W) shows how the text will look. Here I found that if at the time I entered the 85 columns mode the text showed better. You can now see if you need to move anything around, e.g. change the position of one paragraph for another. This is accomplished using BLOCK MOVE and

BLOCK DELETE. If you are satisfied with everything, then all that remains to do is to print the text. Pressing the command [CLEAR] key then P, you will be asked whether you want print or window. Press P again and away it goes.

There is much more it can do, too much to mention here. In fact, the price of the program looks a bit capricious. It has features not found in more expensive programs. It can be used with any printer with minor adjustment to take into account differences in their control code and any special function they might have.

There are cheaper cassette-based programs on the market and indeed more expensive ones but for ease of use with the ROMpak and its simple features, not to mention its price tag, this must make Super Dragon Writer II the most useful program to come from Dragon Data.

### "STYLOGRAPH"

For those of you with Dragon files and disk drives, this word-processing package, which runs under OS-9, may be of interest. Priced at £79.95 we feel that it is an excellent buy when compared to other similar packages. Please note that you would require the OS-9 system disk to run "Stylograph." "This Month's" reviewer is Jay Dunstan Smeed, whose name may be familiar to you also-author of "Inside the Dragon."

Stylograph, Merge and Spellcheck is one of the new titles now available in Dragon Data's Professional Software series for OS-9 operating system on the Dragon 84. The book-style pack contains the floppy disk, a comprehensive manual, a condensed summary reference card and a keyboard function reference chart.

Stylograph is a "professional" word-processor providing facilities normally only found in word-processors costing many times its price. It makes use of the 51 by 24 text screen mode (by using the OS-9's "go to" command) for upper and lower case characters and normal terminal emulation. Stylograph's SUPERVISION mode presents the user with a listing of possible options available such as "EDIT", "PRINT", "SAVE AND RETURN" and The "EDIT" option switches Stylograph into its ESCAPE mode where most of the editing of existing text takes place. The user can scroll through the text on a character, line, or page basis or a "search" string can be used to specify the position within the text.

Comments exist to replace, move, duplicate and delete text and to perform single character overwrite, insert and delete.

The INSERT mode is the one where you can type the text just as you would on a typewriter and formatting is carried out during input on a "what you see is what you get" basis. In other words, the text is laid out on the screen as it will appear in the final print-out. The formatting commands are too numerous to describe in detail here but they do control things like the page length, header/footer, delimiters, line spacing, justification, line length, indentation, character spacing, paragraph settings, printer control parameters and whether characters will be underlined, overlined, autoitalicized, superscripted or emboldened.

About six full pages of 84 text can be held in the RAM text area. However, text files larger than this can be manipulated by storing part of the text on disk and/or by using the Mail Merge package.

Mail Merge has been designed to complement Stylograph in three ways. Firstly it provides the facility to merge together a number of small text files when printing. Secondly it allows a file of any names and

addresses to be merged with a "standard" text file so that letters, etc. can be "personalised" when printed. Thirdly this package can be used to print multiple copies of the same file. In all these cases Mail Merge can take advantage of OS-9's multi-tasking capabilities and be run as a background task. For example, a text file can be opened while a long document is being printed.

The final package of the line, Spellcheck, is used to check each word against a dictionary of over 42,000 words! A two-spell word can be: (a) ignored, (b) added, (c) marked so that it can be easily found by Synthesizer, (d) displayed in context, and (e) corrected. In which case all occurrences of that word will be corrected automatically in the text file.

It has not been possible to do justice to the full range of facilities and options provided by the above packages in the limited space available for this review. Suffice to say that it is an indication of their power to know that the complete range of OS-9 manuals was prepared and printed using them.

## PRINTERS

### DYNER DNV16

Price	£309
Type	Daisy-Wheel
Interface	RS232C or Centronics
Maximum Speed	16cps
Graphics Capability	Limited
Maximum Width of Paper	12 inches
Direction of Printing	Bi-directional
Legibility	High

This printer brings better quality printing within the reach of the home user. Although the machine is rather slow, it prints to a standard that would impress any businessman. It is clean and easy to use, with the controls and DIP switches being easily accessible. The manual is more comprehensible than most.

Provided printing time is not at a premium, the DNV16 offers unbeatable value for money.

### MICROLINE 82A

Price	£299
Type	Dot Matrix
Interface	Centronics (optional RS232C)
Maximum Speed	120cps
Graphics Capability	Block graphics and Hi-res
Maximum Width of Paper	9.5 inches
Direction of Printing	Bi-directional
Legibility	Average

A fast, efficient printer which offers reliability and a sturdy construction. Since it is at the bottom of the Microline range, it does lose a little of its legibility when printing at maximum speed, although this would not trouble most users. All basic functions can be found easily easily in order to get started.

It has an overall feeling of quality and will be of interest to the home/small business user.

### MICROLINE 82

Price	£499
Type	Dot Matrix
Interface	Centronics (optional RS232C)
Maximum Speed	160cps
Graphics Capability	Hi-res facility
Maximum Width of Paper	9.5 inches
Direction of Printing	Bi-directional
Legibility	Good

The Microline 82 has facilities for a wide range of print styles and formats. It is very fast, sturdy and its high resolution features are easy to access. A double strike facility allows the print to approach correspondence quality, although it still falls short of daisy-wheel standard.

If you are looking for a machine to handle the donkey work of your printing requirements, then this one is worth a consideration.

## ADVERTISING RATES

# OKI Microline 92

## So fast - and NLQ

To: Mr. [Name], [Address], [City], [State], [Zip]  
 (specify last name, first name, and full mailing address)  
 And: A [Name] [Address], [City], [State], [Zip] (if available)  
 available to the [Name] [Address], [City], [State], [Zip] (if available)  
 full [Name] [Address], [City], [State], [Zip] (if available)

Available only by mail order, it has that midrange price speed of \$1195, comes in 1.8-cylinder Microturbo SE. Inside as fit as the outside, the toughest capability, the optional 4-cylinder C-1800 Turbo Feeder permits maximum use of the new 1.8-cylinder and turbo.

Quality, reliability and affordable performance are all course hallmarks of the entire OGI Microline range, including the ever popular Microline 60, still a best-selling value-based course.

The engine is completed by the Microline 80A (80-cu) and the Microline 85A (85-cu) which offer a peak speed of 120-cm-seconds and a host of other features.

OSI Macintosh - the world's first compact family.

## CALLING ALL USER CLUBS

Do you realise what you are missing by not contacting Cathy Hyde to tell her of your existence?

Special offers, factory tours and lots, lots more! Too good an offer to be missed!

All you have to do is to contact Cathy at the editorial address with details of your club. You will then have your details published in Dragon World (if you wish) and receive information on how Dragon Data can help you and your club.

## THE TYPIST

### TURN YOUR DRAGON INTO A SIMPLE WORD PROCESSOR!!

You can now write professional quality letters on your printer. Your typewriter becomes a typewriter with full upper and lower case characters. Features include full on screen editing, change, insert or delete any character with fit or to move data from mass storage medium, supersede word wraparound automatically, plus much more. Tape version £9.95, ~~£14.95~~ Disk Version £9.95.

Plus Postbox. Can you beat the Dragon? Full colour Graphics, both tanks on screen, 80 characters Per Line, Five Card Tracks, with automatic use evaluation.

And 'Hi Low'. Based on the popular TV Game, can you get that the next one! Very Hard, Very Addictive.

Postbox and Hi Low are on tape and cost £4.95 each.

Our Prices include Post & Packing and VAT

# FIRE YOUR IMAGINATION...

## HOT PROGRAMS TO FEED YOUR DRAGON AND TANDY COLOR COMPUTER

By Peter Robinson, Mike Jones and Neil Jones  
This is a book contains not only the best programs for your Dragon (or Tandy Color Computer) but also a full directory of all these disc programs available. How you can change from one to how you can produce your own programs. This book divides into four sections: Advanced Games, General and Dragon in Business and Utilities.

PROGRAM 17.2

140pp

£7.95

## LANGUAGE OF THE DRAGON: BASIC ASSEMBLER

By Mike Jones  
To many people, assembly language is a black art, not intended for the average programmer. Mike Jones shows you that it's a just as fun and takes you step by step through every detail of assembly language for the 68000 microprocessor (as used in the Dragon) leading to those techniques that you need to write fully professional programs.

PROGRAM 34.2

240pp

£8.95

## ANATOMY OF THE DRAGON: ADVANCED BASIC PROGRAMMING

By Mike Jones  
Here is a complete guide to programming the Dragon taking you through Dragon hardware as anatomy — chips and boards — as it affects the programming. Game, Post Graphics and Text, High, Low, Graphics, Sound Generation — from multi-tasking programs, Advanced graphics — including animation, Microchip — protocols and the various input/output ports (including BASIC) — relative entry points and system variables.

PROGRAM 36.2
